

 $\mathbf{u} = (\rho, I)_{|t=0} = \begin{cases} (0.7, 0.4), & \text{if } x < 0, \\ (0.8, 0.1), & \text{if } x > 0. \end{cases}$

t = 1 for the initial Riemann problem:

Solution computed using N = 500 discretization points on x = [-1, 1] interval.

Example 2: Case 1-Lax shock and 2-Lax shock. Depiction of the exact solution at
